Abstractions (clojure.org/type selection flowchart)

|   |  |
|---|--|
| Protocols (clojure.org/reference/protocols) |  |
| Define                                      | (defprotocol Slicey (slice [at]))            |
| Extend                                      | (extend-type String Slicey (slice [at] ...)) |
| Extend null                                 | (extend-type nil Slicey (slice [_] nil))     |
| Reify                                       | (reify Slicey (slice [at] ...))              |
| Test  | satisfies? extends?                          |
| Other                                       | extend extend-protocol extenders             |

Records (clojure.org/reference/datatypes)

|        |                        |
|--------|------------------------|
| Define | (defrecord Pair [h t]) |
| Access | (.h (Pair. 1 2)) → 1   |
| Create | Pair. ->Pair map->Pair |
| Test   | record?                |

Types (clojure.org/reference/datatypes)

|              |  |
|--------------|--|
| Define       | (deftype Pair [h t])                     |
| Access       | (.h (Pair. 1 2)) → 1                     |
| Create       | Pair. ->Pair                             |
|              | (deftype Pair [h t]                      |
| With methods | Object                                   |
|              | (toString [this] (str "<" h "," t ">"))) |

Multimethods (clojure.org/reference/multimethods)

|               |  |
|---------------|--|
| Define        | (default multi my-mm dispatch-fn)                  |
| Method define | (defmethod my-mm :dispatch-value [args] ...)       |
| Dispatch      | get-method methods                                 |
| Remove        | remove-method remove-all-methods                   |
| Prefer        | prefer-method prefers                              |
| Relation      | derive underive isa? parents ancestors descendants |
|               | make-hierarchy                                     |

Macros

|         |   |
|---------|---|
| Create  | defmacro definline  |
| Debug   | macroexpand-1 macroexpand (clojure.walk/) macroexpand-all         |
| Branch  | and or when when-not when-let when-first if-not if-let cond condp |
|         | case when-some if-some  |
| Loop    | for doseq dotimes while   |
| Arrange | .. doto -> ->> as-> cond-> cond->> some-> some->>                 |
| Scope   | binding locking time with-in-str with-local-vars with-open        |
|         | with-out-str with-precision with-redefs with-redefs-fn            |
| Lazy    | lazy-cat lazy-seq delay   |
| Doc.    | assert comment doc  |

Special Characters (clojure.org/reference/reader, guide)

|               |  |
|---------------|--|
| ,             | Comma reads as white space. Often used between map key/value pairs for readability.  |
| '             | quote: 'form → ( quote form)   |
| /             | Namespace separator (see Primitives/Other section)   |
| \             | Character literal (see Primitives/Other section)   |
| :             | Keyword (see Primitives/Other section)   |
| ;             | Single line comment  |
| ~             | Metadata (see Metadata section)  |
| *foo*         | 'earmuffs' - convention to indicate dynamic vars, compiler warns if not dynamic  |
| @             | Deref: @form → ( deref form)   |
| '             | Syntax-quote   |
| foo#          | 'auto-gensym', consistently replaced with same auto-generated symbol everywhere inside same '( ... )                                   |
| -             | Unquote  |
| ~@            | Unquote-splicing   |
| ->            | 'thread first' macro ->  |
| ->>           | 'thread last' macro ->>  |
| >!! <!! >! <! | core.async channel macros >!! <!! >! <!  |
| (             | List literal (see Collections/Lists section)   |
| [             | Vector literal (see Collections/Vectors section)   |
| {             | Map literal (see Collections/Maps section)   |
| {'            | Var-quote #'x → ( var x)   |
| #"            | #"p" reads as regex pattern p (see Strings/Regex section)  |
| #{            | Set literal (see Collections/Sets section)   |
| #{(           | Anonymous function literal: #( ...) → (fn [args] (...))  |
| %             | Anonymous function argument: %N is value of anonymous function arg N. % short for %1. %k for rest args.                                |
| #?            | Reader conditional: #?(:clj x :cljs y) reads as x on JVM, y in ClojureScript, nothing elsewhere. Other keys: :cljr :default            |
| #?@           | Splicing reader conditional: [1 #?@(:clj [x y] :cljs [w z]) 3] reads as [1 x y 3] on JVM, [1 w z 3] in ClojureScript, [1 3] elsewhere. |
| #foo          | tagged literal e.g. #inst #uuid  |
| #:            | map namespace syntax e.g. #:foo{:a 1 :b 2} is equal to {:foo/a 1 :foo/b 2}   |
| ##            | (1.9) symbolic values: ##Inf ##-Inf ##NaN  |
| \$            | JavaContainerClass\$InnerClass   |
| foo?          | conventional ending for a predicate, e.g.: zero? vector?   |
| foo!          | instance? (unenforced)   |
| foo!          | conventional ending for an unsafe operation, e.g.: set!  |
|               | swap! alter-meta! (unenforced)   |
| -             | conventional name for an unused value (unenforced)   |
| _             | Ignore next form   |

Metadata (clojure.org/reference/reader, special\_forms)

| Misc      | locking pcalls pvalues pmap seque promise deliver                       |

Refs and Transactions (clojure.org/reference/refs)

|                |   |
|----------------|---|
| Create         | ref   |
| Examine        | deref @ (@form → (deref form))                    |
| Transaction    | sync dosync io!                                   |
| In transaction | ensure ref-set alter commute                      |
| Validators     | set-validator! get-validator                      |
| History        | ref-history-count ref-min-history ref-max-history |

Agents and Asynchronous Actions (clojure.org/reference/agents)

|                 |   |
|-----------------|---|
| Create          | agent   |
| Examine         | agent-error   |
| Change state    | send send-off restart-agent send-via                        |
|                 | set-agent-send-executor! set-agent-send-off-executor!       |
| Block waiting   | await await-for   |
| Ref validators  | set-validator! get-validator                                |
| Watchers        | add-watch remove-watch                                      |
| Thread handling | shutdown-agents   |
| Error           | error-handler set-error-handler! error-mode set-error-mode! |
| Misc            | *agent* release-pending-sends                               |

Java Interoperation (clojure.org/reference/java\_interop)

|            |  |
|------------|--|
| General    | .. doto Classname/ Classname. new bean comparator  |
|            | enumeration-seq import iterator-seq memfn set! class class?  |
|            | bases supers type gen-class gen-interface definterface   |
| Cast       | boolean byte short char int long float double bigdec bigint num  |
|            | cast biginteger  |
| Exceptions | throw try catch finally pst ex-info ex-data (1.9)  |
|            | StackTraceElement->vec (1.10) ex-cause ex-message (clojure.main/) clojure.main/ex-str clojure.main/ex-triage |

Arrays

|        |   |
|--------|---|
| Create | make-array object-array boolean-array byte-array short-array    |
|        | char-array int-array long-array float-array double-array aclone |
|        | to-array to-array-2d into-array                                 |
| Use    | aget aset aset-boolean aset-byte aset-short aset-char aset-int  |
|        | aset-long aset-float aset-double alength amap areduce           |
| Cast   | booleans bytes shorts chars ints longs floats doubles           |

Proxy (Clojure type selection flowchart)

|        |  |
|--------|--|
| Create | proxy get-proxy-class construct-proxy init-proxy |
| Misc   | proxy-mappings proxy-super update-proxy          |

Zippers (clojure.zip/)

|          |  |
|----------|--|
| Create   | zipper seq-zip vector-zip xml-zip                            |
| Get loc  | up down left right leftmost rightmost                        |
| Get seq  | lefts rights path children                                   |
| 'Change' | make-node replace edit insert-child insert-left insert-right |
|          | append-child remove  |
| Move     | next prev  |
| Misc     | root node branch? end?                                       |

Other

|                 |  |
